

The SAF 750 E's effective dust extraction feature also makes it optimally suited for problematic work in confined spaces.

Tough or delicate surface finishing – the masonry renovator can do both.

Range of uses

Through thick and thin.

If, in an old kitchen for example, you need to remove the old coat of oil paint and the upper layer of plaster from a plinth, the masonry renovator is the perfect tool for the job. It is also perfect for shabby concrete which needs to be roughened in preparation for renovation work. Or for loose plaster facades. Or for sticky carpet adhesive residues. The examples go on and on.

Thick or thin, soft or hard coatings – the SAF has the right cutter for any application. For example, paint, plaster and concrete edging can be removed easily using a variety of tapered tooth or flat tooth carbide-tipped cutters. Diamond wheels are best on natural stone, marble or concrete.

You can say goodbye to clouds of dust too, the integrated dust extraction system sucks it all away immediately. This means that you can work in both open and closed spaces with no problem.

The areas of application.

- Removing paint and plaster
- Roughening concrete
- Removing concrete edges (shuttering joints)
- Smoothing or sanding natural stone, sandstone, screed
- Removing mould

All the momentum but without the vibration.

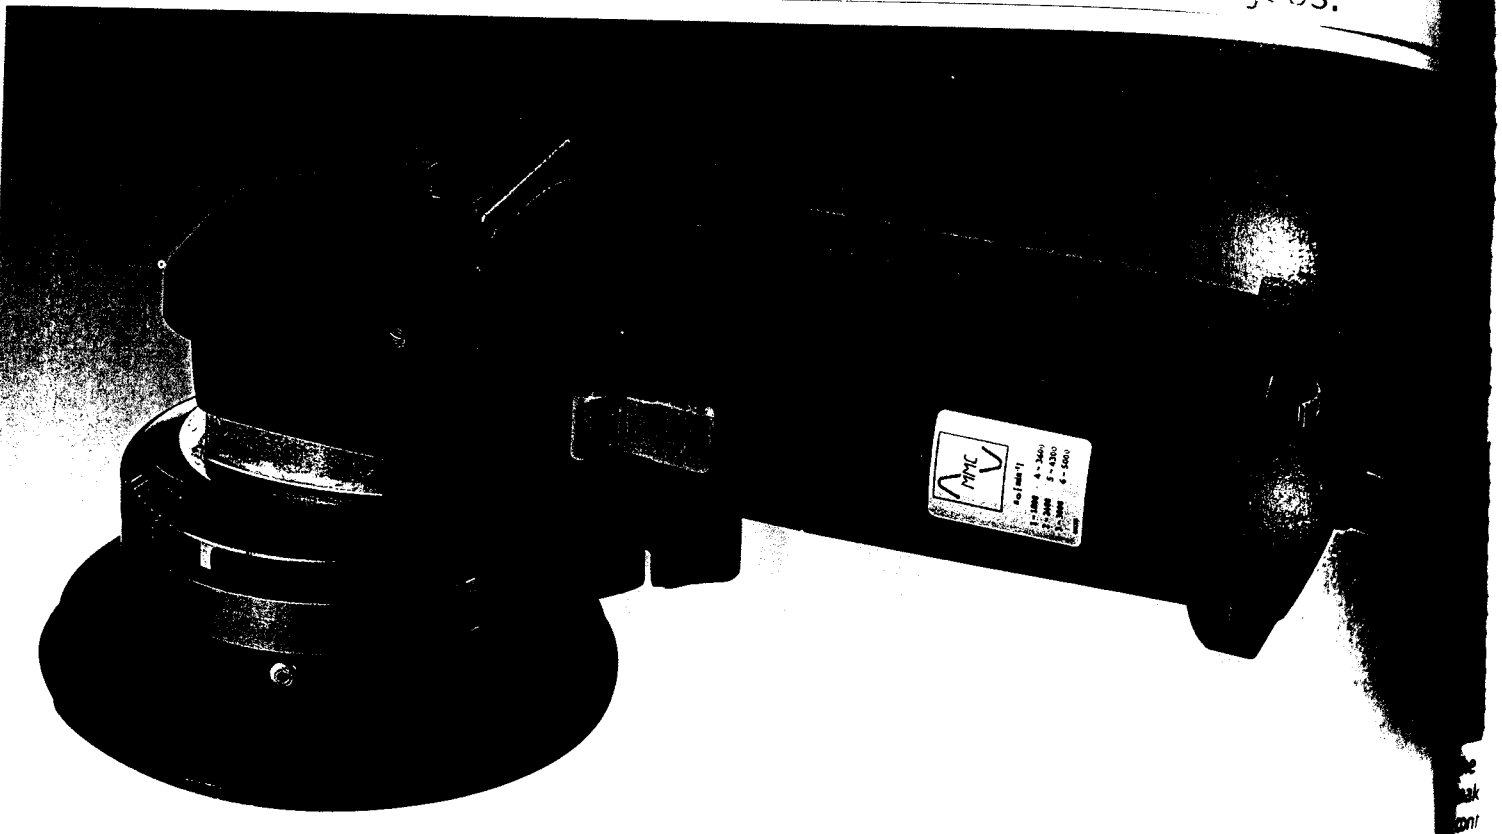

Significant force and constant speed – when you use the SAF 750 E masonry renovator you will soon see how much you can achieve in a short time. This gives you the momentum with jobs which are usually slow and laborious.

Of course, the compact design and the low weight of the machine also contribute to the vigour with which you work. Practically vibration-free running ensures that you can work for a long time without tiring. In addition, a specially-developed cushioning device prevents the cutter from knocking with force against the machine and, therefore, your hands.

Even conversion is fast. Cutting wheels and diamond wheels can be changed in the wink of an eye.

Stirring/renovating

The masonry renovator – The clean solution for stubborn jobs.

The main areas of use of the SAF 750 masonry renovator are removal, smoothing and roughening of surfaces.

The benefits at a glance.

Outstanding results

- Precisely adjustable grinding depth for optimum results.
- Different cutters for multiple applications.
- Electronically-controlled, constant speed and motor with strong pull for even surface finishing.

Significant time savings

- Quick rate of material removal with no residues means that the job takes only half as long as when done by hand.
- Dust extraction ensures that no subsequent cleaning is necessary.

Health and safety

- Smooth start-up feature for jolt-free switch on.
- Vibration isolated cutter head for non-tiring working and safe handling.

Low machine costs and long service life

- Smooth start-up to protect the tool.
- Overload protection to prevent motor overload.
- Special cushioning for long-term, reliable use.
- Dust-proof motor encapsulation prevents wear caused by dust.
- Additional protection offered by the 3 year guarantee.

System benefits

Shows you what's what.

The masonry renovator is as versatile as the range of tasks which arise during masonry renovation. The masonry renovator removes old paint and plaster, roughens concrete and smoothes shuttering joints, and it does all this powerfully, quickly and thoroughly, because it is optimally equipped for these jobs.

The MMC electronics allow you to set the correct speed, which is maintained by the extremely powerful motor, even under a heavy load. **This ensures quick progress.**

The height of the integrated dust extractor hood is adjustable, which means that the grinding depth can be adjusted simply, and the required material removal is guaranteed. Dust from concrete, old plaster and mortar can have a sanding effect on an unprotected motor, despite dust extraction, and can destroy it in a short time. To ensure that the motor in the SAF 750 E masonry renovator **is still functioning reliably after many years, it has fully dustproof encapsulation.**

The SAF 750 E masonry renovator **saves you an enormous amount of time** by comparison with the laborious knocking off of plaster or the chemical removal of old paint.
